Skills

- Javascript, React, Node.js, Express.js, MongoDB, JIRA, Redux, Docker, CI/CD, GitHub Actions, REST API

Experience

Assistant System Engineer, Tata Consultancy Services (TCS)

Sep 2024 - Present

- Data Retrieval & Client Reporting: Authored and executed SQL queries to extract critical production data, creating comprehensive technical reports for client showcases and stakeholder reviews.
- Resolved UI-level defects affecting form validation, dropdown mapping, and submission workflows by analyzing browser console logs, request payloads, and backend database values using SQL queries
- Technical Problem Solving: Awarded 2x Customer Appreciation Awards for maintaining 100% SLA compliance and demonstrating exceptional ownership during critical system outages.
- Incident Management: Leveraged JIRA for end-to-end tracking of application bugs and system incidents, coordinating with external vendors like Oracle for rapid resolution.
- User Management: Managed user lifecycle and security permissions within the Oracle IDCS environment, ensuring secure access and data integrity for enterprise applications.
- System Analysis: Performed root-cause analysis (RCA) on recurring technical issues, utilizing system logs and database traces to improve application stability.

Projects

[MERN Ticketing & Movie Platform](#)

- Architected a full-stack movie ticketing and streaming platform using React, Node.js, Express.js, and MongoDB with responsive UI and RESTful APIs.
- Implemented secure JWT-based authentication, protected routes, and TMDB API integration to deliver dynamic movie data and personalized user experiences.
- Developed scalable state management using Redux Toolkit and localStorage persistence, improving watchlist handling and reducing unnecessary API calls by 40%.

[Automated Workflow Kanban System](#)

- Engineered an automated Kanban workflow management system using Vanilla JavaScript, enabling dynamic task tracking and real-time status transitions.
- Developed an asynchronous task automation engine that migrated tasks across workflow stages based on configurable countdown timers and business logic.
- Implemented persistent state management with LocalStorage, ensuring seamless task recovery, reduced data loss, and uninterrupted user sessions across browser reloads.

Education

Chandigarh Univeristy, MCA

2024

Master of Computer Applications (MCA)

Achievements

- Recognized twice by global clients for excellence in technical support and system reliability.
- Awarded 2x Customer Appreciation Awards for maintaining 100% SLA compliance and demonstrating exceptional ownership during critical system outages.
- Managed client-facing corporate events, demonstrating leadership, communication, and organizational skills.
- Organized and managed college cultural/technical fest operations, ensuring smooth event execution and team coordination.
- Solved 330+ Data Structures & Algorithms problems across LeetCode & Scaler.
